## DETAILED ACTION

### *Election/Restrictions*

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-31, drawn to a method of applying polyacrylamide (PAM) for stabilizing soil particles of a land area from erosive movement about the land area, classified in class 405, subclass 264.
- II. Claims 32-38, drawn to a method of applying polyacrylamide (PAM) for stabilizing soil particles of a land area from erosive movement about the land area including the step of determining the degree of stability of the soil of the land area to be treated including testing the vulnerability to erosion of the soil of the land area to be treated, classified in class 405, subclass 258.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions have different modes of operation, different functions and different effects. Invention II recites method steps of determining the degree of stability of the soil of the land area to be treated including testing the vulnerability to erosion of the soil of the land area to be treated utilizing a tray and the steps recited in claims 33-36 and 38 as well as application rate steps in claim 37 that are entirely different from Invention I reciting method steps of applying a tack coat,

detecting soil saturation due to the reflection of ambient light on the soil surface, specific mixture spray direction steps, core sample removal and specific mixture depth penetration steps.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
